1 Scope Clarification

The interface references Discord and GitHub complaint sources, but direct external platform integrations are not implemented in this release.

This is intentional and consistent with the original project scope: Discord/GitHub connector integrations were not part of the SRS.

2 Purpose

This manual explains how to use the Complaint Management System dashboard for day-to-day complaint triage and tracking.

The app is intended for maintainers who need to:

- review incoming complaints from Discord,
- promote valid complaints into active work,
- track active work on a Kanban board,
- inspect details in a side drawer,
- create new complaints directly.

3 Prerequisites and Startup

Required:

- Node.js and npm
- Docker

From the project root:

```
npm install
cp .env.example .env
npm run setup
npm run dev
```

Open:

- <http://localhost:3000>

The home route redirects to `/dashboard/triage`.

4 Dashboard Layout

The UI has four primary areas:

1. Sidebar (left): navigation, triage count, saved filters, collapse control.
2. Top bar: command palette trigger and New Complaint action.
3. Main content: Triage, Board, or Settings.
4. Overlays: Issue Drawer, Create Complaint modal, Command palette.

5 Navigation

5.1 Triage Inbox

Path: /dashboard/triage

Used to review incoming Discord complaints before promotion.

Filters:

- Pending
- All
- Flagged Duplicate
- Promoted
- Spam

5.2 Active Board

Path: /dashboard/board

Used to track active work through stages:

- Backlog
- Todo
- In Progress
- In Review
- Done

5.3 Settings

Path: /dashboard/settings

Settings cards are currently informational placeholders for future phases.

6 Triage Inbox Workflow

6.1 Inspect complaints

Each row includes complaint number, title, labels, similarity score, reporter, age, status, and quick actions. Click a row to open the Issue Drawer.

6.2 Promote to board

Promote via:

- row hover action,
- key **p** on focused row,
- command palette action,
- drawer footer button.

Result: status moves to **BACKLOG**, item appears on Active Board.

6.3 Mark spam

Mark spam via row hover action, key **x**, command palette, or drawer footer.

Result: status moves to **TRIAGE_SPAM**.

6.4 Mark done

Use key **e** or command palette action.

Result: status moves to **DONE**.

6.5 Bulk actions

When at least two rows are selected, the bulk action bar appears.

Working bulk actions:

- Promote All
- Spam All
- Clear Selection

Placeholder actions (phase-2 style feedback only):

- Mass Reply and Close
- Assign
- Label

7 Active Board Workflow

7.1 Move cards

Drag a card from one column to another.

The UI updates optimistically, then persists the status on the server.

7.2 Read card metadata

Cards show complaint number, priority marker, labels, optional linked PR/CI status, and assignee avatars.

Click a card to open the Issue Drawer.

7.3 Milestone progress

If a milestone is available, header shows title, closed/total count, and a progress bar.

8 Issue Drawer Workflow

8.1 Open and close

Open from triage rows, board cards, or key **Enter** on focused triage row.

Close with **Esc**, close icon, backdrop click, or footer Close.

8.2 View content

Drawer may include:

- title, number, status, stale marker,
- labels and priority,
- Discord thread context (Discord-source complaints),
- issue description (GitHub-source complaints),
- AI similarity section,
- internal notes and public replies tabs,
- right-side metadata: assignees, labels, milestone, GitHub links.

8.3 Focus mode

Toggle with key **f** or focus button in drawer header.

8.4 Drawer actions

Working actions:

- Promote to GitHub (footer)
- Mark Spam (footer)

Currently shown as coming soon:

- Merge into
- Flag Duplicate
- Create Branch
- Note compose persistence from textarea submit

9 Create New Complaint

Open modal via New Complaint button or key **c**.

Fields:

- Title (required)
- Description
- Priority

Submit with button or **Ctrl+Enter** (or **Cmd+Enter** on macOS).

Result: complaint is created with source **GITHUB** and initial status **TODO**, then user is routed to Active Board.

10 Command Palette

Open with `Ctrl+K` (or `Cmd+K`) or top-bar trigger.

Groups:

- Navigate: triage, board, settings
- Actions: assign, promote, spam, done, merge, flag duplicate
- View: toggle focus mode

Some actions are placeholders depending on implementation state.

11 Keyboard Shortcuts

Shortcut	Effect
<code>c</code>	Open Create Complaint modal
<code>Esc</code>	Close drawer or create modal
<code>Ctrl+K / Cmd+K</code>	Open command palette
<code>?</code>	Toggle keyboard help event
<code>f</code>	Toggle drawer focus mode
<code>j / k</code>	Move triage focus down/up
<code>Enter</code>	Open focused triage complaint
<code>p</code>	Promote focused complaint
<code>x</code>	Mark focused complaint as spam
<code>e</code>	Mark focused complaint done
<code>a</code>	Assign-to-me event (placeholder)
<code>m</code>	Merge event (placeholder)
<code>g</code> then <code>t</code>	Go to Triage
<code>g</code> then <code>b</code>	Go to Board
<code>g</code> then <code>s</code>	Go to Settings

12 Status Reference

- `TRIAGE_PENDING`: New triage complaint
- `TRIAGE_SPAM`: Triage complaint marked as spam
- `TRIAGE_PROMOTED`: Exists in model (current promote flow sets `BACKLOG`)
- `BACKLOG`: Board backlog
- `TODO`: Ready for implementation
- `IN_PROGRESS`: Active work
- `IN_REVIEW`: Under review
- `DONE`: Completed
- `CLOSED`: Closed/duplicate terminal state

13 Implemented vs Placeholder

Implemented and persisted:

- triage promote, spam, done,
- bulk promote and bulk spam,
- board drag-and-drop status updates,
- complaint creation,
- drawer data loading.

Placeholder/phase-2 style interactions:

- settings cards,
- merge and duplicate-flag actions,
- assign-to-me keyboard/command behavior,
- note submission from textareas.

14 Troubleshooting

App or DB errors

Ensure Docker is running, then execute:

```
npm run db:up  
npm run db:push  
npm run db:seed
```

No demo data visible

Reseed:

```
npm run db:seed
```

Port 5432 conflict

Stop conflicting PostgreSQL service or update database configuration.

UI appears stale

Hard refresh browser and retry action.

15 Suggested Daily Workflow

1. Start in Triage Inbox for pending and critical complaints.
2. Promote valid complaints to board.
3. Mark clear spam quickly.
4. Drive active work across board columns.
5. Open drawer for context before major state changes.
6. Create direct internal complaints via modal when needed.
